ABSTRACT

In a fiber optic current sensor having a coiled sensor fiber (1) which encloses a current conductor (S), and at least one phase delay element (4, 5)adjoining the sensor fiber (1), the at least one phase delay element (4, 5) has a phase delay with a temperature dependence it least such that at approximately compensates for a temperature dependence of a Verdet's constant (V) of the sensor fiber (1). It thereby possible to achieve an at approximately temperature-independent sensor signal.
